

16. A computer-readable medium storing a program for operating a digitizer capable of measuring the duration of a user input and capable of detecting movement, said program comprising the steps of:

receiving user input;

classifying the user input by using at least one of a time threshold and a movement threshold; and,

performing an action based on the user input.

25. A system for acting on user input to a computer comprising:

a stylus;

a digitizer capable of measuring the duration of a user input and capable of detecting movement and including a display;

a processor;

wherein said digitizer receives a user input via contact between said stylus and said digitizer and wherein said processor classifies the user input by using at least one of a time threshold and a movement threshold and wherein said processor performs an action based on the user input.
